

SEAECOSHIELD® OPERAVIVA

Protective Ecological Coating

The ultimate eco-friendly barrier for your boat's hull

RINA

SEAECOSHIELD® OPERAVIVA

The new generation of eco-friendly marine coatings

SEAECOSHIELD® OPERAVIVA represents a true revolution in the world of marine hull coatings.

Designed to meet the needs of **both recreational and professional boating**, it combines **advanced technology, high performance, and environmental sustainability**, offering long-lasting protection without compromising the marine ecosystem.

Innovation and sustainability in a single formula

The formulation of **SEAECOSHIELD® OPERAVIVA** is based on next-generation **PFAS-free PTFE and high-performance water-based elastic resins**.

This exclusive combination creates an **extremely resistant protective film** that firmly adheres to the surface, ensuring **maximum adhesion and a long-lasting barrier** against fouling, abrasion, and environmental stress.

Completely **free of solvents and biocides**, the product is **non-toxic, VOC-free**, and entirely **non-polluting**, making it a conscious choice for those who wish to help preserve the marine environment.

Performance that lasts over time

SEAECOSHIELD® OPERAVIVA forms an **ultra-smooth surface** that significantly **reduces water friction**, improving the hull's hydrodynamic efficiency and **helping to lower fuel consumption and operating costs**. **Its durability — exceeding 5 years —** eliminates the need for frequent repainting, resulting in substantial savings in both time and money.

Unlike traditional antifouling paints, the surface stays clean for longer and can be **easily maintained even underwater** using simple spatulas or sponges, without the need for hauling out or invasive maintenance.

Easy application, maximum performance

SEAECOSHIELD® OPERAVIVA can be applied using standard painting equipment (roller, brush, or spray), ensuring uniform coverage and quick drying.

Its elastic formulation allows it to **adapt to the structural movements of the hull**, preventing cracks and detachment over time.

The choice of the future for responsible boating

Choosing **SEAECOSHIELD® OPERAVIVA** means adopting a **technologically advanced, safe, and sustainable solution** — fully compliant with the latest European environmental protection and emission reduction directives.

With its outstanding performance, absence of hazardous substances, and durability exceeding industry standards, **SEAECOSHIELD® OPERAVIVA** is the definitive answer to the new demands of **modern boating** — increasingly focused on quality, safety, and respect for the sea.
